Continuation of 11. does NOT place the application in condition for allowance because: Response to Arguments

1. Applicant's arguments filed 6/27/2006 have been fully considered but they are not persuasive.

2. The applicant submits that Jordan does not teach the claim feature of a buffer-to-buffer flow control mechanism of the client signal. Examiner posits it is not unreasonable to interpret the conventional buffer overflow control as disclosed by Jordan and admitted to by the applicant to correlate to buffer-to-buffer flow control mechanism of the client signal. As disclosed by Jordan (col7 lines 36-55), each and every client signal (Ethernet signals) is passed through a buffer (buffer 116) which implements a conventional buffer over flow control to prevent loss of data content (buffer flow control mechanism). Thus a different Ethernet signal (different client signal) will also be passed through the said buffer, which also implements a conventional buffer over flow control on said Ethernet signal. The Examiner posits that this may be interpreted as buffer-to-buffer flow control mechanism of the client signal, wherein each client signal (different data stream or Ethernet signal) conforms to the conventional buffer overflow control, and "buffer-to-buffer" be interpreted as a buffer overflow control of different Ethernet signals. Applicant further submits that this buffer control be called a "buffer-by-buffer flow control". Examiner posits it is not unreasonable to correlate and interpret the buffer-to-buffer flow control of claim 1, as a buffer-by-buffer flow control as mentioned in the remarks. It should further be noted, that a buffer flow control of one buffer affects and controls the outcome and flow of another buffer in a system. Thus the conventional buffer over flow control of the buffer disclosed by Jordan may be interpreted as buffer-to-buffer flow control, as it affects and controls other buffers in the system.

3. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a protocol such as Fiberchannel or ESCON, page 11 of remarks) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims.

See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
